

# Real Case Study

## Urgent Response Preparedness

6 inches of rain fell within 3 hours -  
resulting in a 100-year flood

Bottom Line: Millions of dollars  
saved in potential lost revenue

### CHALLENGE

Critical infrastructure was destroyed after bottom floor of a major hospital was immersed in flood waters. The hospital needed to return to normal operations ASAP. Initial estimates were **6 months**.

### SOLUTION

Our SMARTPRINT® technology supported the recovery effort, immediately assisting FEMA, first responders, facility managers, contractors and maintenance staff.

- Building records/blueprints were lost in basement flood, but data remained intact & usable.
- Responders minimized damage by quickly locating temporary generators, chillers/boilers & AHU's. Facility ops restored within **3 weeks**. Critical operational area opened in 2 weeks.
